

# SELF-CLEANING FILTRATION SYSTEM NOBLOC 50 MICRON

## Filtration phases in this unit:

- \* Automatic cleaning coarse filter at 0.5 (optional 1 mm)
- \* Self-cleaning 50 micron (optional 25 micron) filter

## Typical fields of application

- \* Breweries
- \* Protection high pressure pumps
- \* Industrial cooling water for production process

## Justification of Cost

- \* No chemicals
- \* Due to 24/7 self-cleaning no blocked flow
- \* No process down time for self-cleaning filter
- \* Low maintenance cost
- \* Short Return On Investment
- \* Optional high dirt load self-cleaning filter to accommodate production deviations

## On-site requirements

- \* 5 bar air pressure or water pressure or hydraulic pressure in order to operate valves and pistons for the self-cleaning facility
- \* starting at 230 V or 110V electricity or optional solar panels for the smaller skids
- \* storage tanks
